

Iverlife-Gold

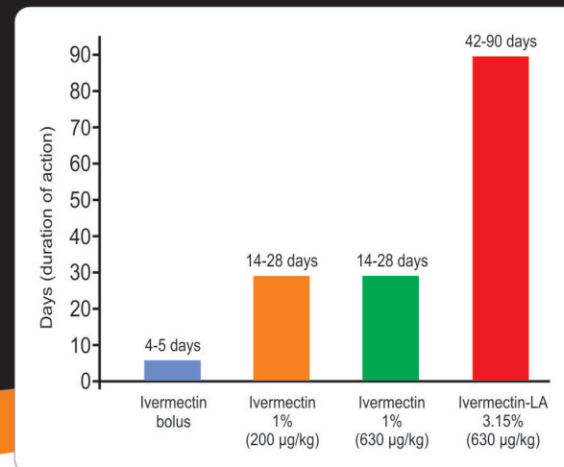

Ivermectin 31.5% Long Acting Injection

IFG

For long lasting effect

Iverlife-Gold has long lasting effect than ivermectin oral (bolus) and 1% injection

Indications :

Iverlife-Gold Inj. has long lasting action for the treatment and control of infestations caused by gastrointestinal and pulmonary nematodes as well as for ectoparasitosis caused by ticks, lice, mange and grubs.

Use in pregnancy :

Iverlife-Gold Inj. can be used at any stage of pregnancy. Cows treated with ivermectin during the period of 56 days after insemination had no effects on pregnancy and no teratogenic effects in calves. Similarly, no adverse effects were observed and normal calves were born to cows treated repeatedly in the second and third trimesters of pregnancy

Pulliam and Preston, 1989
